SUMMARY

Postdoctoral researcher with expertise in neural rendering, generative diffusion models, and GPU-accelerated optimization. Demonstrated success in translating advanced algorithms into scalable, production-ready tools—culminating in the commercialization of neural adaptive tomography at Voxray GmbH. Passionate about bridging research and real-world impact through high-performance solutions.

RESEARCH INTERESTS

Neural Rendering, Generative Diffusion Models, 3D Reconstruction, Inverse problems, Computational Photography, Computational Imaging, High-Performance Computing, Optimization

EXPERIENCE

Washington University in St. Louis

Postdoc Collaborator: Dr. Ulugbek Kamilov

Diffusion model for inverse problems, | Python, C++, Libtorch, CUDA

June 2024–Now

- Designed a diffusion unfolding network for image restoration, achieving faster inference and better quality across multiple tasks (e.g., deblurring, super-resolution, inpainting) in a single training pipeline.
- Implemented on C++/Libtorch/CUDA, improving the performance by 15%.
- Collaborated with radiologists to optimize model for real captured dataset.
- Supervised 2 students working on 3D and time-sequence diffusion model research.

Visual Computing Center, KAUST

Ph.D student with Dr. Wolfgang Heidrich

Neural Representation on tomography [2, 7, 5, 1] | C++, Libtorch, CUDA

June 2021–Sept. 2023

- Formulated differentiable models and designed relevant priors using C++ and Libtorch.
- Developed an adaptive Density /Tensorial Density Field for efficient and large cryo-ET dataset.
- Implemented an Isotropic Fourier Prior to effectively mitigate peak patterns in the reconstruction.
- Visualized the reconstructed volumes with Avizo.
- Impact:** This research contributed to the establishment of **Voxray GmbH**, demonstrating the commercialization potential of neural adaptive tomography.

Visual Computing Center, KAUST

Ph.D student with Dr. Wolfgang Heidrich

Motion compensation and reconstruction of cryo-ET [6] | C++, OpenMP

Mar. 2020–June 2021

- Considered beam-induced motion during the reconstruction.
- Utilized a plug-and-play prior to address noise in the electron tomography data.

Visual Computing Center, KAUST

Ph.D student with Dr. Wolfgang Heidrich

Rethink ISP pipeline [3] | Python, Pytorch

June. 2020–June 2022

- Proposed a Denoising(DN) → Super-resolution(SR) → Demosaicking(DM) worked best in all sequential pipelines.
- Released PixelShift200 dataset for color channel sampling.

Visual Computing Center, KAUST

Ph.D student with Dr. Wolfgang Heidrich

Stereo Event-Camera Particle Tracking Velocimetry [4] | Matlab

Oct. 2019–Mar.2020

- Developed the first event-camera-based stereo-PTV setup for measuring time-resolved fluid flow.
- Proposed an optimization framework to retrieve dense fluid velocity field from the event data.

Institute of Microelectronics, Tsinghua University

Research assistant with Dr. Shuguo Li

True Random Number Generator [8] | Verilog

July 2014 - July 2016

- Designed a Cross Ring Oscillator based TRNG (CRTRNG). The CRTRNG gains **240Mbps** random number, while consuming only about **3000** logic elements on Altera Cyclone IV.

- Developed a **1Gbps** Cross Ring Oscillator based TRNG circuits based on SMIC 65nm.

EDUCATION

King Abdullah University of Science and Technology
Ph.D. in Electrical and Computer Engineering

Sept. 2016-Nov. 2023
 Advisor: Dr. Wolfgang Heidrich

Tsinghua University
M.Eng. in Integrated Circuits Engineering

Sept. 2013-July 2016
 Advisor: Dr. Shuguo Li

Beijing University of Posts and Telecommunications
B.Eng. in Communication Engineering

Sept. 2009-July 2013
 Advisor: Dr. Yitong Liu

SKILLS

C++, Libtorch, CUDA, Python, PyTorch, C, Matlab, Verilog, Paraview, Blender, Avizo
